## 1-(4-Bromophenyl)-2-(phenylsulfonyl)ethanone

**H. A. Abdel-Aziz, S. W. Ng and E. R. T. Tiekink**

**Abstract:** The overall conformation of the title molecule,  $C_{14}H_{11}BrO_3S$ , is L-shaped, as seen in the value of the dihedral angle formed between the terminal benzene rings of  $75.44(13)^\circ$ . The presence of C-H...O interactions leads to the formation of linear supramolecular chains along the *a*-axis direction in the crystal structure. These are connected into supramolecular arrays in the *ab* plane via C-H... $\pi$  contacts.
